

C l a i m s

1. Battery holder (30) for an electronic device comprising an outer surface (31), means (32) for receiving at least one exchangeable battery (20) at a side opposite to said outer surface (31) and means (33,34) for connecting said battery holder (30) releasably to an electronic device such that electrical contact elements (21) of at least one battery (20) received by said battery holder (30) come into contact with electrical contact elements of said electronic device and such that said outer surface (31) of said battery holder (30) forms part of the outer surface of said electronic device.
2. Battery holder (30) according to claim 1, wherein said means (32) for receiving at least one exchangeable battery (20) comprise guiding elements (32) for enabling a guided reception of at least one battery (20).
3. Battery holder (30) according to claim 1 or 2 further comprising locking means for fixing at least one received battery (20) to said battery holder (30).
4. Battery holder (30) according to one of the preceding claims, wherein said means (33,34) for connecting said battery holder (30) releasably to an electronic device comprise first connecting means (33) for interacting with first connecting means (12) of an electronic device and second connecting means (34)

for interacting in a snapping manner with second connecting means (13) of said electronic device when said first connecting means of said battery holder (30) are interacting with said first connecting means (12) of said electronic device.

5. Cover (10) for an electronic device, which cover (10) comprises a battery holder (30) according to one of the preceding claims, wherein said battery holder (30) is connected to said cover (10) by said means (33,34) for releasably connecting said battery holder (30) to an electronic device.
6. Cover (10) according to claim 5 comprising a button for releasing said battery holder (30) from said cover (10), which button interacts with means (13,34) connecting said battery holder (30) to said cover (10).
7. Electronic device comprising a battery holder (30) according to one of claims 1 to 4, wherein said battery holder (30) is connected to said electronic device by said means (33,34) for releasably connecting said battery holder (30) to an electronic device.
8. Electronic device according to claim 7 comprising a button for releasing said battery holder (30) from said electronic device, which button interacts with means (13,34) connecting said battery holder (30) to said electronic device.
